

*Dragon is an intrusion protection system that allows full inspection of suspect traffic, right down to packet level, providing a solution for enterprises of all sizes.*

#### Detection and Analysis

This is an intrusion protection system designed specifically to meet the unique security requirements of the enterprise environment.

It offers comprehensive features that bring improved security to the enterprise.

Only Dragon, with its unique network-based detection capabilities, modular host intrusion protection components, server management, and event management provides a reliable solution for detecting the broad array of attacks present in today's constantly changing security landscape.

Enterasys Dragon IDS meets the challenge of securing a modern network by providing high-speed sensors to detect suspicious activity, forensic data to determine the impact of network attacks and the scalability to deploy and manage large numbers of sensors without negatively impacting the operation of your network.

With the combined power of its Network Sensor, Host Sensor and Enterprise Management Server, Dragon provides an integrated solution for detecting misuse and attacks across the entire IT infrastructure. It's the only IDS to combine events on the network with those on the host, firewall and application, providing complete protection for the small and large enterprise. With comprehensive analysis and real-time monitoring capabilities, Dragon delivers a higher level of protection to the business-critical IT infrastructure.

#### IDsec and Dragon

We added Dragon to our portfolio in response to customer demand for a wider choice of intrusion protection products.

Dragon appeals particularly to more technically oriented staff who want to examine traffic down to packet level – and if that's where they want to go, we're very happy to accompany them.

#### About Enterasys

Enterasys Networks provides best-in-class infrastructure solutions to enterprise customers worldwide.

With one of the industry's broadest and deepest product portfolios – plus a full range of service and support offerings – Enterasys is uniquely qualified to meet the evolving needs of today's businesses. Its mission is clear: leveraging its own technology and thought leadership as well as the strengths of its strategic partners, it strives to develop flexible, scalable, intelligent solutions that provide customers a distinct competitive advantage.

**Feel Good About Your Network**

*IDsec is an independent company specialising in network security. We can assess your security and advise on long-term protection: as we have for a range of blue-chip clients since 1997.*
