

Multifunction Firewalls from Fortinet

Fortinet's high performance multi-function firewalls cover all levels of need, from small offices through large enterprises to network carriers and hosting centres.

Unified Threat Management

Multi-function firewalls combine a number of protection mechanisms in one device:

- anti-virus
- anti-spyware
- content filtering
- intrusion protection (IPS)
- VPN (IPsec and SSL)
- firewall
- anti-spam

This means that application-level threats can be handled by the same device that provides traditional network boundary security services.

FortiGate Family

With dedicated ASIC-accelerated hardware, FortiGate devices give high levels of performance at an attractive price.

So multiple functionality does not mean compromising on throughput; at the same time, it allows for a range of devices covering all sizes of organization.

At the entry level, small and home offices with, say, 5 users can enjoy full protection with a FortiGate-50 Antivirus Firewall than is up and running in minutes.

In contrast, the FortiGate-5000 series is a family of chassis based systems that provide a scalable platform for the largest enterprises and service providers.

FortiGate Antivirus Firewalls and FortiOS firmware have received certification for Common Criteria Evaluation Assurance Level 4 Augmented (EAL 4+). This gives both public and private sector customers assurance that these products have gone through a long and rigorous testing process.

Note that Fortinet provides all the software running in its devices rather than offering a collection of third-party applications.

We have supplied FortiGate firewalls to customers in the distribution and leisure sectors, as part of our overall network security offering.

Our trained engineers can provide you with the most appropriate solution and ensure that it is configured to match your needs.

Fortinet is the pioneer and leading provider of multi-threat security systems that enable secure business communications and deliver the best security, performance and total cost of ownership available. Its award-winning security systems and subscription services protect the networks of more than 20,000 customers worldwide – including the largest telecommunications carriers, service providers and enterprises of all sizes.

Feel Good About Your Network

IDsec is an independent company specialising in network security. We can assess your security and advise on long-term protection: as we have for a range of blue-chip clients since 1997.
